ABOUT ME

Computer Science student specializing in Cloud, AI, and Software Engineering, with a strong commitment to building robust systems and driving social impact. As Regional President of TFISC Semarang and Semifinalist at BINUS Startup Vaganza, I combine cross-functional leadership with deep technical execution to address real-world challenges. Passionate about applying advanced engineering skills to deliver scalable, user-centric solutions in a dynamic tech or consulting environment.

EDUCATION

BINUS University – Semarang, Indonesia

Bachelor of Computer Science (Streaming: Cloud Technology) | GPA: 3.53/4.00 | 2024 - Present

- Relevant Coursework: Cloud Computing, Database Systems, AI Engineering, Software Engineering, UI/UX Designer

EXPERIENCE

Teach For Indonesia Student Community (TFISC)

Regional President | Feb 2026 - Present

- Lead regional operations for one of BINUS University's largest student organizations, overseeing board members and activists to execute community initiatives.
- Oversee end-to-end delivery of social programs and manage communication with institutional stakeholders.

BINUS University

Marketing Team Promotion (Part-Time) | Jun 2024 - May 2025

- Managed prospective student data pipelines post-event, ensuring high data accuracy for recruitment analytics.
- Supported campus recruitment logistics and executed targeted outreach campaigns.

Himpunan Mahasiswa Teknik Informatika (HIMTI)

Activist: Publication & Marketing | Feb 2025 - Jan 2026

- Developed digital content strategies and campaign concepts to maintain consistent brand identity for SoCS events.

PROJECTS

Cloud Audit Analytics Platform | Data Analytics & Audit Automation Project

- **Problem & Build:** Addressed the need for efficient financial audit procedures by developing a Python-based audit analytics platform. Generated 10,000 synthetic financial transaction records using Faker and implemented anomaly injection to simulate irregular transactions for risk identification.
- **Validation & Analysis:** Prepared structured transaction datasets for audit testing and analytical review, establishing a foundation for automated anomaly detection and risk-based audit workflows.

AKANG - AI-Based Livestock Platform | Semifinalist at BINUS Startup Vaganza

- **Problem & Build:** Conceptualized an AI platform transforming traditional livestock into digital assets; co-developed financial projections, business models, and mobile/web UI prototypes.
- **Validation & Deploy:** Pitched the end-to-end strategy to industry judges, earning a Semifinalist placement out of multi-campus competitors.

Drowsiness Detection System | Computer Vision & Deep Learning Project

- **Problem & Build:** Addressed road safety risks (SDG No. 3) by developing an AI microsleep detection system using OpenCV and CNN + LSTM to classify driver fatigue states.
- **Validation & Deploy:** Engineered real-time trigger logic to activate immediate audio alerts and automated Telegram notifications upon detecting persistent fatigue.

Luxury Brand Website | UI/UX Design & Front-End Development Project

- **Problem & Build:** Designed and developed a luxury brand website focused on delivering a refined digital experience. Translated UI/UX designs from Figma into a functional website using HTML, CSS, and JavaScript, emphasizing visual hierarchy, brand consistency, and intuitive navigation.
- **Implementation & Optimization:** Implemented the website interface and interactive elements, applying responsive web design principles to support a consistent user experience across screen sizes.

Sistem Apotek SMA | Full-Stack Web Development Project

- **Problem & Build:** Addressed pharmacy inventory management needs by developing a web-based application using Laravel, PHP, and MySQL to organize medicine records and streamline inventory operations.
- **Validation & Deploy:** Implemented database-driven inventory management and structured application workflows to support medicine data maintenance and stock monitoring.

AREA OF EXPERTISE

- **Technical & Cloud:** Cloud Computing Fundamentals, Data Systems, UI/UX Design (Figma).
- **Business & Product:** System Analysis, Requirements Gathering, Project Management.
- **Leadership & Soft Skills:** Regional Team Leadership, Stakeholder Management, English & Indonesian.
